To whom it may concern,

It is my great pleasure to recommend Mr. Cheng-Yu Ho (何承諭) for his application. He joins my lab (PecuLab) from 2018 academic year till now, as follows course; “Special Research (專題研究).” This course aims towards the student who already has familiar learned the fundamentals of programming language and covered advanced applications of deep learning. Mr. Ho is one of the hardest-working students in my lab. In my lab, he does excellent works and always participates attentively. He always finishes tasks on time in our research plan. He has impressed me because most students need a one- or two-week extension to hand in their works. Whenever he shares his logic of data processing and problems that he confronts when analyzing data, I know that he is highly sensitive to data, thinks independently, and is always confident in overcoming challenges and difficulties. His active and positive attitudes inspired other students to do more and better. In particular, he and his team members publish the Special Research Project on Applied Sciences, “Data-Augmented Hybrid Named Entity Recognition for Disaster Management by Transfer Learning.”

Furthermore, after I introduce an application of machine learning in data science, he asks for more information, and thus join my summer course (全國夏季學院) as the Data Science Programming (資料科學程式設計) TA. He is a resourceful and highly motivated person. He helps students to conduct exploratory data analysis. Based on his outstanding performance and personality, I strongly recommend him to your program without reservations. If you need any further information concerning this application, please do not hesitate to contact me.

Sincerely Yours,

Yun-Cheng Tsai, 2020/06/28
